

SECONDARY INJECTION AND POWER QUALITY TESTING

Our testing and commissioning team offers comprehensive testing services to the commercial and industrial solar installers.

With the changes to **AS/NZS 4777:2015** the grid connected **solar systems above 30kW** must install grid protection relays and **requires secondary injection testing to prove** that the correct operation of the protection relay as per the parameters set by the DNSP.

Some DNSP's also require power quality readings with the solar system connected and disconnected as part of their requirements to solar systems
